KEY ACHIEVEMENTS

Built internal ops hub solo with AI-assisted development

Delivered production web and mobile workflows (APIs, notifications, dispatch automation) myself, using AI-assisted tools—owned from idea through daily use by drivers and dispatch.

Launched "Geo Driver" mobile app

Delivered Android/iOS workflows for drivers—documents, inspections, load stops, and navigation—so field updates sync with dispatch dashboards in real time.

Promoted to Operations Analyst

Earned promotion to Operations Analyst by owning account data quality, dispatch-adjacent reporting, and cross-team workflow clarity. While in senior dispatch, took on analyst work, served informally as an operations advisor on handoffs and processes, and helped teammates adopt AI-assisted tools for internal workflows—then moved into the analyst role at Geo Logistics LLC.
